## **Result Framework Document**

## For

## National Fisheries Development Board (NFDB) Hyderabad

(2012-13)

#### **SECTION 1**

#### Vision

To develop aquaculture and fisheries by adapting new and innovative production technologies, management and utilization of less utilized water resources in a sustainable manner and promote domestic marketing.

#### Mission

To increase present level of fish production from 6.57 million tonnes to 10.57 Million tonnes, contributing to food, health, economy, exports and employment in the country.

#### **Objective**

- 1. To bring activities relating to fisheries and aquaculture for focused attention and professional management.
- 2. To coordinate activities pertaining to fisheries undertaken by different Ministries/Departments in the Central Government and also coordinate with the State/Union Territory Governments.
- 3. To improve production, processing, storage, transport and marketing of the products of capture and culture fisheries.
- 4. To achieve sustainable management and conservation of natural aquatic resources including the fish stocks.
- 5. To apply modern tools of research and development including biotechnology for optimizing production and productivity from fisheries.
- 6. To provide modern infrastructure mechanisms for fisheries and ensure their effective management and optimum utilization.
- 7. To generate substantial employment.
- 8. To train and empower women in the fisheries sector.
- 9. To enhance contribute of fish towards food and nutritional security.

#### **Function**

There is a large untapped potential in fisheries and aquaculture, which can contribute considerably to improve the livelihoods as also women empowerment. The future development of aquaculture and fisheries depends on adoption of new and innovative production technologies, management and utilization of less utilized water resources and proper market tie-ups. With this background, the National Fisheries Development Board (NFDB) would seek to realize the full potentials of Indian fisheries through coordination of different agencies and public-private partnerships. The main function of NFDB is to promote, plan and organize programmes for the purpose of development of fisheries and aquaculture on an intensive and nation wide basis and to render assistance in the implementation of such programmes. The NFDB would also advice the states and Union territories in the formulation of policies and programmes for fisheries development.

Section 2

#### Section 4

# Description and definition of success indicators and proposed measurement methodology

- 1. Bringing more area under fish/ shrimp/ prawn culturepotential exists in India augment production from freshwater/ brackish water aquaculture resources, which are spread across the length and breadth of the country. With concerted efforts to mobilize farmers to adopt fish/ application of appropriate shrimp farming, technologies farming and fish production sustainable fish seed and availability of institutional finance, it would be possible to bring in substantial hikes in the annual fish production from the aquaculture sector. The success can be measured in terms of more number of ponds being constructed for this purpose in addition to renovation of existing ponds for aquaculture.
- 2. Establishment of seed hatcheries, rearing ponds and feed mills-Availability of quality seed of cultivable fish/shrimp species has always been a limiting factor for intensification of fish/shrimp production and also for coverage of additional area proposed to be developed under aquaculture. Requirement of quality fingerlings of 80-100 mm size is a prerequisite for fisheries development in reservoirs and in culture ponds, since; realization would be more if large size fingerlings are stocked. Feeding is a must in farming of fish/shrimp as they result in better growth. With increase in fish/shrimp culture the number of seed hatcheries, rearing ponds and feed mills should increase.
- 3. **Increase in trout culture-** The trout aquaculture in hills is of very recent origin. The Scientific and intensive aquaculture of trout has to be initiated for development of low volume culture systems in raceways. This would result in the utilization of the cold water resources of the country. The success can be measured in terms of more number of trout hatcheries, trout feed mills, raceways and running water fish culture units being established.

- 4. **Diversification of species and organisms that are cultured**Seaweed cultivation, oyster culture, mussel culture, cobia, sea bass and milk fish culture as a diversification activity in coastal aquaculture and mariculture, has tremendous potential all along the Indian coast. The success can be measured in terms of more number of farmers taking up seaweed, oyster and mussel culture.
- 5. **Development of reservoirs for fisheries-** Reservoirs form an important source of fish production in India. Considering the fish production potentiality of the reservoirs in India, moderate investments can yield larger quantities of fish besides increasing the employment opportunities for the rural population. The success can be measured in terms of undertaking fish fingerling stocking in all the small, medium and large reservoirs of the country and training the fishermen in reservoir fisheries management.
- 6. **Development of ornamental fisheries-** There is a lot of scope in India for ornamental fish trade as it is endowed with a suitable climate, water resources and large manpower base. Their commercial breeding and rearing can be done at the back yards of households in addition to establishing medium and integrated ornamental fish culture units to meet fast growing domestic and international market of the ornamental fishes. The success can be measured in terms of more number of ornamental fish culture units and aquarium fabrication units being established.
- 7. **Modernization of fishing harbours and fish landing centers** The fishing harbours and landing centers are the initial centers of fish handling. Due to poor sanitary and hygienic conditions as well as temperature prevailing at these centers, there is substantial reduction in quality of the fish landed. Provision of clean and sanitary building with ancillary facilities like potable water and ice, fly-proofing arrangements and chilled storage at fishing harbours is an essential requirement to maintain quality and safety requirements for the fish landed.
- 8. Modernization and establishment of fish markets and value addition of fish- The establishment of domestic markets plays a very crucial role in the development of fisheries sector in the country. Apart from minimizing post-harvest losses, it helps in increasing revenue, enhancing employment opportunities and offers high standards of hygiene and sanitation leading to food safety. Further to minimize post harvest losses fish dressing centers and value addition by means of drying of fish can also be undertaken.

- 9. **Training of farmers and fisheries personnel-** Skill up-gradation is an important component of any production-oriented activity. Therefore, to meet this important requirement of human resource development in the fisheries sector, the Board envisages mobilization of existing facilities available under public and private sectors to impart training to the fish farmers/ entrepreneurs and fisheries personnel in the country.
- 10. **Shrimp farming in coastal waters-** In India, commercial shrimp farming started gaining roots only during the mid eighties. On one hand these activities can wean extra pressure from the coastal waters, on the other hand they can add to the fish production to meet the growing requirements of the country. The potential brackish water are available in the coastal regions of the country for shrimp culture is estimated between 1.2 and 1.4 m ha. Presently, an area of about 1,84,115 ha is under farming with an average production of about 1,10,000 metric tonnes of shrimp per year. The average productivity has been estimated at about 1,000 kg per hectare per year.

#### Section 5:

#### Specific Performance Requirements from other Departments

## Specific performance requirements from other departments that are critical for delivering agreed results

Specific Performance requirements from other Departments/Agencies:

- 1. **Planning Commission**: Planning Commission have to give time-bound approval of EFC Memorandum for incorporating any changes in the schemes, increasing outlays etc.
- 2. **Dept of Animal Husbandry, Dairying and Fisheries:** The DAHD&F has to give administrative approval for the modification to be introduced in the schemes based on the recommendations of the stakeholders/ research community and release the Grant in Aid for the Board on time.
- 3. **State Governments**: State Governments are implementing almost all the schemes. The State Governments should submit viable proposals without any time delay enclosing all the relevant documents for the speedy processing of the proposals and sanctioning of funds. They should monitor the progress of the work and ensure completion of the projects on time.
- 4. **All Fisheries Research Institutes**: They are involved in evaluating the projects are implemented by the State Governments and technology up-gradation.

# Section 6 Outcomes/ impact of activities of NFDB
